

Working list for Allstage website

1. Fixes

- **Videos Under Artists Section are not showing the titles**

We have to check the whole code for this task.

Because your site has so many static urls in codes. It may be source of errors.

And we need to check and fix the reading and view module from db.

- **Add Jack Richardson Award to the home screen**

I will add it once you provide me. I think it won't difficult.

2. Updates

- **Add Ability to admin to add users (Artists, Venues) without having to attach an email address however just set a username per user. Which will allow the admin account to add events, media, and modify the profile.**

We have to modify the user management page in admin how can add artists and venues.

I checked the dashboard and there is not exist related Venues.

I think we have to add the pages what admin can manage the venues.

And we have to add the codes what will allow the admin account to add events, media, and modify the profile.

This work will relate with the database and we may have to add some tables and connect them with codes.

It will require us many codes and hours.

- **Update the redesign based on the need for additional information**

We have to modify the artists and venues page for this task.

Share the social links section is not so difficult, but important thing is the "book this artist" section.

It should be have a form and functions for send the notification to the users.

We will check the original codes for notification, if this site had some notification code before.

If it has no any module for notification, we have to add a new module for that.

- **Add Categories Section based on each artists music genres. Venues will also be able to sort via VIP Discounts, Music Stores, Production, Recording Studios, Affiliates.**

We have to check the database for all artists and venues.

For this task, artists and venues table should have special tables for sort fields.

Then we can add informations in this table and we can add codes with that tables for sort.

We will need to discuss more details with the client for this.

I want you to add more description in here.

It should be also take many hours.
